

IN THE CLAIMS

Please amend the claims as follows:

Claim 1 (Currently Amended): An information processing device, comprising:

first managing means for managing first IDs, each first ID for identifying another  
device other than said information processing device itself;

second managing means for managing second IDs for identifying contents;

supplying means for supplying at least one of said second IDs managed by said first  
managing means to said other device making a request for distribution of said contents;

user ID managing means for managing a user ID corresponding to at least one of said  
first IDs;

receiving means for receiving at least one of said first IDs and said at least one of said  
second IDs from said other device;

identifying means for identifying said at least one of said first IDs corresponding to  
said user ID received by said receiving means;

generating means for generating a schedule for distributing said contents identified by  
said at least one of said second IDs to said other device corresponding to said received at  
least one of said first IDs by said receiving means;

transmitting means for transmitting said schedule generated by said generating means  
to said other device; and

distributing means for distributing said contents to said other device according to a  
request according to said schedule transmitted by said transmitting means,

wherein said user ID managing means for managing manages a user ID corresponding  
to at least two of said first IDs,

wherein said identifying means for identifying identifies said at least two first IDs  
corresponding to said user ID received by said receiving means, making a query to a

communication device by transmitting said at least two first IDs and receiving first IDs  
chosen from said at least two first IDs,

wherein said generating means for generating generates a schedule for distributing  
said contents identified by a second ID to said other device corresponding to a first ID  
received by said identifying means, and

wherein said distributing means for distributing distributes said contents to said other  
device corresponding to said first IDs received by said identifying means according to said  
schedule generated by said generating means.

Claim 2 (Currently Amended): An information processing device, comprising:  
first managing means for managing first IDs, each first ID for identifying another  
device other than said information processing device itself;  
second managing means for managing second IDs for identifying contents;  
user ID managing means for managing a user ID corresponding to at least one of said  
first IDs;  
supplying means for supplying at least one of said second IDs managed by said  
second managing means to a communication device making a request for distribution of said  
contents;  
receiving means for receiving said user ID and said at least one of said second IDs  
from said communication device;  
identifying means for identifying said at least one of said first IDs corresponding to  
said user ID received by said receiving means;  
generating means for generating a schedule for distributing said contents identified by  
said at least one of said second IDs to said other device corresponding to said identified at

least one of said first IDs in the event that said at least one of said first IDs has been identified by said identifying means; and

distributing means for distributing said contents to said other device according to said schedule generated by generating means,

wherein said user ID managing means for managing manages a user ID corresponding to at least two of said first IDs,

wherein said identifying means for identifying identifies said at least two first IDs corresponding to said user ID received by said receiving means, making a query to said communication device by transmitting said at least two first IDs and receiving first IDs chosen from said at least two first IDs,

wherein said generating means for generating generates said schedule for distributing said contents identified by a second ID of said second IDs to said other device corresponding to a first ID received by said identifying means, and

wherein said distributing means for distributing distributes said contents to said other device corresponding to said first IDs received by said identifying means according to said schedule generated by said generating means.

Claim 3 (Cancelled).

Claim 4 (Currently Amended): An information processing device according to Claim 2 [[3]], wherein in the event that ~~the~~a user having said other device has specified a point-in-time for distributing said contents through said other device, said generating means determines whether or not transmission of said contents can be performed at the specified point-in-time, and in the event that a determination has been made that the transmission can

be performed, said generating means generates a schedule for transmission of said contents with the specified transmission point-in-time.

Claim 5 (Currently Amended): An information processing system having an information processing device, another device and a communication device, comprising:  
the information processing device including:

first managing means for managing first IDs, each first ID ~~for~~ identifying another device other than said information processing device itself;

second managing means for managing second IDs for identifying contents;

user ID managing means for managing user IDs corresponding to at least one of said first ~~ID~~ IDs;

supplying means for supplying at least one of said second IDs managed by said second managing means to a communication device making a request for distribution of said contents;

receiving means for receiving said user ID and said at least one of said second IDs from said communication device;

identifying means for identifying at least one of said first IDs corresponding to said user ID received by said receiving means;

generating means for generating a schedule for distributing said contents identified by said at least one of said second IDs to said other device corresponding to said identified at least one of said first IDs in the event that said at least one of said first IDs has been identified by said identifying means;

transmitting means for transmitting a schedule for starting to write said contents identified by said at least one of said second IDs to said other device corresponding to said identified first ID, and

the another device comprising:

a storage means for storing received said contents according to said schedule  
generated by a generating means,

wherein said user ID managing means for managing manages a user ID corresponding  
to at least two of said first IDs,

wherein said identifying means for identifying identifies said at least two first IDs  
corresponding to said user ID received by said receiving means, making a query to said  
communication device by transmitting said at least two first IDs and receiving first IDs  
chosen from said at least two first IDs,

wherein said generating means for generating generates said schedule for distributing  
said contents identified by a second ID of said second IDs to said other device corresponding  
to a first ID received by said identifying means, and

wherein said distributing means for distributing distributes said contents to said other  
device corresponding to said first IDs received by said identifying means according to said  
schedule generated by said generating means.

Claim 6 (Currently Amended): An information processing device according to Claim  
1, further comprising:

determining means for determining whether or not said other device corresponding to  
said at least one of said first IDs can receive and store said content data transmitted according  
to said schedule; and

updating means for updating said schedule in the event that said ~~determination~~  
determining means ~~[[have]]~~ has determined that said other device corresponding to said at  
least one of said first IDs cannot receive and store said content data.

Claims 7-9 (Cancelled).

Claim 10 (Currently Amended): An information processing device, comprising:

- a first managing unit configured to manage first IDs, each first ID for identifying another device other than said information processing device itself;
- a second managing unit configured to manage second IDs for identifying contents;
- a supplying unit configured to supply at least one of said second IDs managed by said first managing unit to said other device making a request for distribution of said contents;
- a user ID managing unit configured to manage a user ID corresponding to at least one of said first IDs;
- a receiving unit configured to receive at least one of said first IDs and said at least one of said second IDs from said other device;
- an identifying unit configured to identify said at least one of said first IDs corresponding to said user ID received by said receiving unit;
- a generating unit configured to generate a schedule for distributing said contents identified by said at least one of said second IDs to said other device corresponding to said received at least one of said first IDs by said receiving unit;
- a transmitting unit configured to transmit said schedule generated by said generating unit to said other device; and
- a distributing unit configured to distribute said contents to said other device according to a request according to said schedule transmitted by said transmitting unit,

wherein said user ID managing unit manages a user ID corresponding to at least two of said first IDs,

wherein said identifying unit identifies said at least two first IDs corresponding to said user ID received by said receiving unit, making a query to a communication device by

transmitting said at least two first IDs and receiving first IDs chosen from said at least two first IDs,

wherein said generating unit generates said schedule for distributing said contents identified by a second ID of said second IDs to said other device corresponding to a first ID received by said identifying unit, and

wherein said distributing unit distributes said contents to said other device corresponding to said first IDs received by said identifying unit according to said schedule generated by said generating unit.

Claim 11 (Currently Amended): An information processing device, comprising:  
first managing means for managing first IDs, each first ID for identifying another device other than said information processing device itself;

second managing means for managing second IDs for identifying contents;

supplying means for supplying at least one of said second IDs managed by said second managing means to said other device upon said other device making a request for distribution of said contents;

identifying means for identifying at least one of said first IDs managed by said first managing means based upon ~~the~~ information for identifying said at least one of said first IDs and said at least one of said second IDs received from said other device;

generating means for generating a schedule for distributing said contents identified by said at least one of said second IDs to said other device corresponding to said identified at least one of said first IDs in the event that said at least one of said first IDs has been identified by ~~said a~~ specifying means; and

distributing means for distributing said contents according to said schedule generated by said generating means,

wherein in ~~the~~a event that the user having said other device has specified a point-in-time for distributing said contents through said other device, said generating means ~~determines~~ determine whether or not transmission of said contents can be performed at the specified point-in-time, and in the event that determination has been made that the transmission can be performed, said generating means ~~generate~~a generates said schedule for transmission of said contents with the specified transmission point-in-time,

wherein in ~~the~~a event that said identifying means identify two first IDs of said first IDs based upon the information received from said other device, said identifying means identify one first ID of said two first IDs as a billing user ID for identifying the user which is to be billed for said contents, and the other first ID of said two first IDs as a destination ID for identifying the destination device for receiving said contents, and

wherein said generating means ~~generate~~ generates a schedule for billing the user identified by said billing user ID, and ~~distributing~~ distributes said contents to said other device identified by said destination ID.

Claim 12 (Previously Presented): An information processing device according to Claim 1, wherein in the event that the user having said other device has specified a point-in-time for distributing said contents through said other device, said generating means determines whether transmission of said contents can be performed at the specified point-in-time, and in the event that a determination has been made that the transmission can be performed, said generating means generates a schedule for transmission of said contents with the specified transmission point-in-time.

Claim 13 (Currently Amended): An information processing method, comprising:

managing first IDs, each first ID ~~for~~ identifying an other device other than said information processing device itself;

managing second IDs for identifying contents;

managing a user ID corresponding to at least one of said first IDs;

supplying at least one of said second IDs to said other device making a request for distribution of said contents;

receiving said user ID, at least one of said first IDs, and said at least one of said second IDs from said other device;

generating a schedule for distributing said contents identified by said at least one of said second IDs to said other device corresponding to said received at least one of said first IDs;

transmitting said schedule generated by said generating means to said other device;  
and

distributing said contents to said other device according to a request according to said schedule transmitted;

identifying said at least two first IDs corresponding to said user ID received, making a query to said other device by transmitting said at least two first IDs and receiving first IDs chosen from said at least two first IDs; and

distributing said contents to said other device corresponding to said first IDs received by said identifying according to said schedule generated by said generating.

Claim 14 (Currently Amended): A computer readable storage medium encoded with instructions which when executed by a computer cause a processor to execute a method comprising:

managing first IDs, each first ID ~~for~~ identifying an other device other than said information processing device itself;

managing second IDs for identifying contents;

managing a user ID corresponding to at least two of said first IDs;

supplying at least one of said second IDs to said other device making a request for distribution of said contents;

receiving said user ID, at least one of said first IDs, and said at least one of said second IDs from said other device;

generating a schedule for distributing said contents identified by said at least one of said second IDs to said other device corresponding to said received at least one of said first IDs;

transmitting said schedule generated by said generating means to said other device;  
and

distributing said contents to said other device according to a request according to said schedule transmitted;

identifying said at least two first IDs corresponding to said user ID received, making a query to a communication device by transmitting said at least two first IDs and receiving first IDs chosen from said at least two first IDs;

generating said schedule for distributing said contents identified by a second ID of said second IDs to said other device corresponding to a first ID received by said identifying;  
and

distributing said contents to said other device corresponding to said first IDs received by said identifying according to said schedule generated by said generating.
